Potential competing interests: No potential competing interests to declare.

The authors delved into the influence of green finance on carbon emissions in India, highlighting the crucial aspect of optimizing energy usage. They kickstarted their investigation by delving into the theoretical framework, seeking to grasp the intricate ways in which green finance shapes carbon emissions. Within this exploration, they closely examined the impact of energy consumption. Consistently, their findings revealed a noteworthy decrease in carbon emissions due to green finance, a conclusion that remained robust even after accounting for potential endogeneity.
