This below recommendation must be complied before considering this article for publication. Steps must be considered.

1. Clearly state the primary objective of your paper in the abstract. It should be evident to the reader what the paper aims to achieve or investigate.
2. While the abstract introduces various dimensions of the longevity of EV operations, consider organizing the content in a more structured manner.
3. You can use subheadings or bullet points to make it easier for readers to follow the key aspects you intend to cover.
4. Provide a brief background or context to highlight why the longevity of EV operations is a critical issue. Explain the significance and relevance of this topic in the context of sustainable transportation and the global transition to EVs.
5. When discussing advancements in battery technology, consider mentioning specific breakthroughs or innovations that have had a significant impact on EV longevity. This will make the abstract more concrete and informative.
6. Expand on the environmental aspects related to battery recycling and second-life applications. Explain how these strategies contribute to reducing the environmental footprint of EVs and why they are crucial.
7. Emphasize the global aspect of the paper by discussing how different regions or countries are addressing the longevity of EV operations. Are there variations in approaches or policies on a global scale?
8. Mention briefly how policy support and consumer behavior affect the longevity of EVs. This will provide a more comprehensive overview of the multifaceted aspects you mentioned. Conciseness: Keep the abstract concise and focused on the main points. Avoid introducing too many ideas or details that might overwhelm readers.
