Potential competing interests: No potential competing interests to declare.

The manuscript cannot be accepted in the present form due to several reasons.

- Presentation is very poor.
- Language needs to be corrected in many places.
- The structure of the manuscript is required to be in the standard form: literature survey, formulation of the problem statement, possible approaches to resolve the problem, and comparison with existing literature available on the same topic of precision agriculture.
- Sections of the paper should be rearranged, i.e., Sections 5 and 6 can be combined in the "Introduction" section.
- The literature survey is limited, and most content is without reference.
- Section 6 should mention references.
- Figures should be presented just after their first mention.
- Each symbol of the equation should be defined.
- Algorithm steps are written too short and cannot be understood.
- There should be a separate section for the dataset used.
