

Review of: "Technological quality of wheat grains and flour as affected by nitrogen fertilization and weather conditions"

Iqtidar Hussain

Potential competing interests: No potential competing interests to declare.

Abstract

Concluding and recommendation sentence is missing.

Introduction

Following points must be cleared before publication

1. some botanical discussion of wheat and its genotype as influenced by its environment.
2. Research hypothesis
3. Research gap in past review of literature
4. Research limitation
5. significance of this study
6. contribution in understanding and new knowledge

Material and methods

It is a three-factor experiment but here it is not described properly.

Results

Improve your English grammar. Write LSD values under table 1 to 5.

Discussion

Give proper reasoning of each parameter. Role of flag leaves and spikes towards quality of grains is missing. Vernalization impact on grains quality are missing. Role of upper limit of nitrogen application impact on growth? Any impact of split application of nitrogen with difference sources? Method of nitrogen application. Major and significant of your research in the last are missing.
