Retinal dystrophy with inner retinal dysfunction and ganglion cell anomalies

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. *Retinal dystrophy with inner retinal dysfunction and ganglion cell anomalies*. ORPHA:397758

Retinal dystrophy with inner retinal dysfunction and ganglion cell anomalies is a rare, genetic, retinal dystrophy disorder characterized by decreased central retinal sensitivity associated with hyper-reflectivity of ganglion cells and nerve fiber layer with loss of optic nerve fibers manifesting with photophobia, optic disc pallor and progressive loss of central vision with preservation of peripheral visual field.
