Dear Editor:

In this manuscript entitled "**Toward the Realization of Nanogate Capacitors: In Search of Practical Advice**" I think it's better to discuss the below questions. Therefore, I suggest a revision for the manuscript.

Comments:

1. Abbreviations should be defined in the first application.
2. The number of all equations should be referred to in the text.
3. All parameters in all equations should be defined.
4. Discussions should be extended.
5. Nanostructures should be presented if possible.
6. The authors should explain the importance and novelty of the work with more details.

Yours sincerely,

Asma Khoobi
