Potential competing interests: No potential competing interests to declare.

Literature review in the introduction needs revision in the simplification of sentences matter. In some parts, reading is hard to follow. Also there are several new articles that should add into introduction.

Please add more details in FEM model (which is very important). This part is main section of articles and needs more details like equations and boundary conditions.

The authors should add meshed domain and some thermal results. Also, the software that they used.

Sound and concise conclusions and abstract with the supporting results should be given to the reader without repeated discussion and results.

Validation of present finite element model with some other work.

What are the boundary conditions of the structure? Can the authors explain completely?
