Review of: "Home alone: A population neuroscience investigation of brain morphology substrates"

This is study in a in the field of neuroscience.

There are a number of concerns with this study which include the following:

- Most of the references used are outdated and need to be updated.
- In the abstract section, the statistical results should be mentioned only descriptively and very briefly.
- Incomplete results are written in the abstract.
- Write the final research proposal in the discussion.
- Match the keywords with the mesh.
- The importance of the subject and the reason for the study is very incomplete and should be completed.
- Explain how to conduct the study and how to observe ethical issues.
- Mention the study method and entry and exit criteria.
- Explain how to sample in the introduction.
- In the discussion section, first write the main results of the study and then compare it with other studies.
- Give your reasons.
- Complete the conclusion.
- Make suggestions.
- Write the strengths and weaknesses of the study.
