CALGB 9251 Regimen

National Cancer Institute

Source

National Cancer Institute. *CALGB 9251 Regimen*. NCI Thesaurus. Code C63621.

A regimen comprised of a prephase (or cytoreductive phase), followed by two different chemotherapy regimens, given on an alternating schedule and used to treat adult L3 acute lymphoblastic leukemia (ALL3 or Burkitt's-type) and adult small non-cleaved cell (Burkitt's) lymphoma.
