Potential competing interests: No potential competing interests to declare.

1. It is crucial to gain a better insight into the current water quality in Ethiopia, especially regarding heavy metal contamination. By obtaining specific information about this issue, beneficial results may follow.
2. What is the process for storing water samples for bacterial analysis?
3. Should be a map of the research area is provided that displays the sampling points.
4. The description of the study area is incomplete, as it does not feature vital data such as population density and the unique features of the chosen kebeles. Adding these details would give readers a clearer context for the study and enable them to evaluate the study's applicability to other situations.
5. Information should be included regarding the reliability and accuracy of the analytical methods for heavy metal analysis in order to be of aid.
