Potential competing interests: No potential competing interests to declare.

After thoroughly examining the manuscript titled "A Survey of Large Language Models in Tourism (Tourism LLMs)," I would like to provide some constructive feedback on the content. It is evident that the paper delves into the realm of Large Language Models (LLMs) and their application within the tourism domain. However, in order to align with academic standards, it is recommended that the authors enhance the scientific rigor of the manuscript.

The current presentation of the material leans more towards a descriptive report on LLMs and their practical implications rather than a scholarly research paper. To bolster the scientific integrity of the work, I suggest including graphical representations of the models' training processes, insights on learning rates, discussions on overfitting, and other pertinent technical details.

Moreover, it is crucial to expand the reference section to encompass a more comprehensive array of scholarly sources. As it stands, the inclusion of only one reference may limit the depth and credibility of the paper.

Given these considerations, I believe that further refinement is necessary before considering this manuscript for publication in a scholarly platform such as Qeios.
