Dear authors,

Although I think that the study is well constructed and well written, I recommend that some missing issues be completed.

- Make sure that current literature is included. It should be ensured that the literature is systematically examined backwards, starting from February 2024.
- Writing the conclusion in a single paragraph provides an incomplete explanation. The writing on the results should be expanded in the context of comparative literature and recommendations.
- Finally, the explanation regarding the originality of the work is insufficient. The aspects that make the study different should be explained.

Thanks,

Best regards,
