Behaviour Change Intervention Ontology (BCIO)

Definition: A that observes current performance of the behaviour with the person's knowledge but without providing feedback about their behaviour.

Comment: The monitoring agent can be a human or a technical device. If observation is part of a data collection procedure rather than a strategy aimed at changing behaviour, do not code; if feedback given, code only 'provide feedback on behaviour BCT' and not this class; if observing outcomes code 'observe outcome of behaviour without feedback BCT'.

This definition was imported from the Behaviour Change Intervention Ontology (see https://bciosearch.org/). Comments and suggestions for improvements are welcome using the Qeios review system.

Definitions imported from the Behaviour Change Intervention Ontology (BCIO) are what are known as 'ontological definitions'. See this article in Qeios for an explanation https://www.qeios.com/read/YGIF9B.

Ontological definitions can sometimes be hard to read. In those cases we also include an informal definition.

Definitions also often require elaboration to make it clear how they should be used and what they include. In those cases we include a comment.

Also, definitions sometimes require an explanation as to how they came about to help users understand how they relate to alternative definitions. In those cases we include a curator note.
