Potential competing interests: No potential competing interests to declare.

This is an important article which focuses on the planned growth of Indian economy from 2023 to 2047. The authors have not focused on strategic plans by various ministries to solve the problems. They didn't compare the radical innovations in China, Japan, Republic of Korea, and Singapore.

The authors could have obtained information on the problems faced by various private sectors, deemed universities, professional institutions and the institutes of national importance of India.

Even after 75 years of freedom, most of the higher education institutes have not focused on the global network of universities, establishing satellite centers in foreign countries and including overseas scholars in higher education. The development proposals of European Union, China, Republic of Korea, and Japan are needed to compare the gaps in Indian economic planning.

After identifying many slow growths in many areas by the authors, it is expected that the authors propose needed changes for rapid implementation and growth.

Any reader will look for additional initiatives by the government to achieve excellence.

The authors can review their paper again and do remedial measures.
