

Review of: "e-Health and knowledge assessment of students and academic staff recommendations for updating nursing curricula"

Albana Poloska

Potential competing interests: No potential competing interests to declare.

The abstract and article are quite interesting and well-written following the proper steps of research article. The purpose of the study and the specific objectives are clearly described. The methodology is suitable for a scientific article. The discussions followed the right line, touching on the most essential points of the study. The conclusions and recommendations are clear and within the objective of the study. It would be better that the references be contained in a single style in the study because they are in different styles.
