Agatolimod Sodium

National Cancer Institute

Source

National Cancer Institute. *Agatolimod Sodium*. NCI Thesaurus. Code C28580.

The tricosasodium salt of a synthetic 24-mer oligonucleotide containing 3 CpG motifs with potential antineoplastic and immunostimulatory activity. Agatolimod selectively targets Toll-like receptor 9 (TLR9), thereby activating dendritic and B cells and stimulating cytotoxic T cell and antibody responses against tumor cells bearing tumor antigens.
