Review of: "The Spectral Theory Of Periodic Ordinary Differential Equations"

Shaymaa Shraida¹

1. University of Baghdad, Iraq

This article is very useful and well-written, but there are some comments:

1. The line before equation 9 and after equation 15 has the equation number missing.
2. Give the number only for the important equations or those that you need to use later.
3. In my opinion, try to give the statement of the theory or explain it, then give the cases.
4. I have not seen the conclusion!
5. In the abstract, you mentioned three types of equations; try to compare them to show the reader which one is better to use.
