

# Review of: "[Review Article] Excessive Aluminum in Soil"

Rajiv Mohan Agarwal

Potential competing interests: No potential competing interests to declare.

The manuscript needs attention on several points, some of which are being mentioned below:

...

Effects of aluminum accumulation in soil

Paragraph 02 :

...This suggests ...aluminum species present...'

- -NOT supported by references (primary in particular)
- Paragraph 02 :
- '...specific mechanism of toxicity has also been examined...'
- -REFERENCES are missing
- 
- Remediation Strategies:

'...In addition, phytoremediation techniques...plants that are tolerant...'

-SPECIFIC REFERENCES are missing ?

Recent Advances:

...'Another recent advancement...(Santos et al,

2014)...'

-Don't we have later reference/s ?

Abstract:

'...Excessive aluminum in soil, plant growth, environmental factors, and human health...'

-'Environmental factors' may better be replaced by environment...

'...Recent advances include phytoremediation,

genetic engineering, and nanotechnology...'

-With respect to what (context missing)???

Hence, in my opinion, the manuscript should be thoroughly revised before it is considered for publication.
