

# Review of: "Clinical and Subclinical Bovine Mastitis: Staphylococcus aureus Isolation and Identification from Dairy Farms Located in and Around Hawassa Town, Southern Ethiopia"

Athanasios Chalias

Potential competing interests: No potential competing interests to declare.

The process for determining the sample remains unclear. It would be helpful to understand if all farms in the region were included in the sampling process and how the number of samples per farm was determined. Consider adding a map.

In the section addressing "Risk Factors Associated with Mastitis," it's noted that only the 115 subclinical cases were further examined, based on the table 3 that follows. However, since the title of the research refers to "clinical and subclinical cases," consider adding a paragraph/table including information on clinical cases, as they also contribute significant insights.

Kindly consider enhancing the references by incorporating more recent research findings to ensure the inclusion of up-to-date and relevant information.
