I really enjoyed reading this article on Factors Associated with Status Disclosure Outcomes Among Antiretroviral Treatment (ART) Participants in Public Health Facilities in Mekelle City, Tigray, Ethiopia. The author has done an excellent job in highlighting the various issues related to the disclosure of HIV positive status and drawing the attention of health providers to the profile of people who test negative when disclosing their positive status. to HIV. I particularly appreciated the section of the article that discussed the benefits of disclosing HIV positive status, as this is an aspect that is often overlooked. However, I would have liked to know more about the government's efforts to mitigate the negative outcomes of HIV positive status disclosure and how we can get involved as a researcher and citizen. Overall, I think this article is very informative and will help make more people aware of the importance of sharing HIV positive status which is a determining factor in the resilience process of people living with HIV under ARV treatment.
