Potential competing interests: No potential competing interests to declare.

Is your study an RCT?

Please clarify it!

Why didn't you use the WHODAS scale for functional outcomes in DSM 5?

Visual arts lessons have a positive impact on the social functional outcomes of patients with schizophrenia. But on the other side, visual arts could not be the main rehabilitation for these patients. Visual arts should be combined with other rehabilitation programs such as Integrated Psychological Therapy and Integrated Neurocognitive Therapy. Please mention that!

Discussion part

What are the advantages and disadvantages of your study?

What are the clinical and research implications of your study?

All the best!
