

# Review of: "Stakeholders' Perception of Socioecological Factors Influencing Forest Elephant Crop Depredation in Gabon, Central Africa"

Lassina Traoré

Potential competing interests: No potential competing interests to declare.

## Study area

Clarification is needed in this part to better understand the results of this work :

What is the total human population around the park? What are the primary social and economic activities that take place in the villages near the park? What type of climate?

What are the main animal species present in the park?

What are the main crops and plantations in the fields that surround the park?

Is there a great diversity of plant forms?

Which plant species are preferred by elephants and are connected to crop fields?

## Results

Sub-section : Identified themes and subthemes

Authors should only present the results! It seems to me that there is a discussion element in this part, especially from the second sentence to the end of this paragraph!

Decision: This manuscript has to be considered for publication after authors integrate the necessary corrections.
