Potential competing interests: No potential competing interests to declare.

The article has a clear and engaging writing style, but it lacks depth and detail on the topic of copper nanoparticles for viral skin infections. A review article should provide a comprehensive overview of the current research and evidence on the topic, including specific examples of studies that have used copper nanoparticles, their methods and results, and their implications for the field. The article should also discuss the factors that affect the performance of copper nanoparticles, such as particle size and morphology, and compare and contrast the findings and conclusions of different authors. The article, as it is, does not fulfill the criteria of a review article and needs to be revised and expanded.
