Potential competing interests: No potential competing interests to declare.

I enjoyed reading the paper, however, I would suggest that in the introduction section the authors mention other studies related to transformative learning and English teacher's personal growth. What are other studies' discussions, and their conclusions? Which recent studies deal with this topic?

Provide clearer structure of the paper i.e., IMRaD structure. The study's goals are not stated, yet the authors directly start explaining the six stages. The conclusion part needs to be more substantial.
