

# Review of: "[Case Report] High Bifurcation and Anatomical Variation of the Brachial Artery"

Laszlo Kostyal

Potential competing interests: No potential competing interests to declare.

Dear Author,

Although the article is nicely written, it lacks novelty.

The high bifurcation of the brachial artery is a well documented variation with an approximately 10-15% frequency of occurrence.

The embryological part is well explained.

Maybe some slight improvement of the English text would also be useful.

Best regards
