Thank for giving me the privilege to review the article titled ' Allergies in India: Myths, Misconceptions and Awareness', which caters to a essential contemporary topic. Following are my observations:-

1. Introduction is rudimentary and needs elaboration with focus on rationale of the study and its importance.
2. Methodology is deficient as regards study design, sampling technique, calculation of sample size, exclusion criteria including since in covid-19 disease and diagnostic parameters used and statistical software and tests used. Tool development and pre testing including its reliability and validity.
3. Results need detailed analysis.
4. There is room of improvement in the discussion
5. In conclusion also there is room for improvement and addition.
