Potential competing interests: No potential competing interests to declare.

The theme of the work is particularly important, given the current moment we are living in with the emergence of new AI tools (generative AI) made available free to the general public. However, it presents some important questions about the use of AI in education without delving into the discussion about each of them.

I also missed references throughout the text that only appear at the end, in the bibliographical references section.

I suggest the authors consider reading the book "The Shallows: How the Internet is Changing the Way We Think, Read, and Remember" by Nicholas Carr. The book does not talk about AI but deals with some issues related to those highlighted in this work.
