

Review of: "Thermal Comfort Temperature Evaluation in Hospital Wards for Patient Safety and Climate Change Sustainability"

Cherif Bougriou

Potential competing interests: No potential competing interests to declare.

The paper is difficult to read. The bibliographical references are well exploited. The thirty-seven references used range from 1971 to 2023. Prospects were not given. The paper is very interesting. Authors should consider the following comments and remarks:

1. The authors of the reference [12] are Lomas et al. or RezaHoseini and Noori?
2. You cite De Dear and Brager [30] in the text and Matzaraki et al. in the references section.
3. Ballinger or Eliasson is the author of [20]?
4. Give some relevant results in the summary.
5. In p.3, the next sentence is incomprehensible: "The winter months, from December to February, are mild with temperatures ranging between 10°C and 15°C. very little changes have been made to the four-story hospital, where the wards rise from the podium's lower three floors.".
6. the English language need to revise!
7. It's what (0.3-3 micro) in page 4?
8. The read of the text is too difficult without Nomenclature!
9. Give the dimensions of the physical quantities used in table 2.
10. Give the pertinent results obtained as well as the perspectives in the conclusion.
11. The numerical model isn't given!
