## Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Optic nerve edema-splenomegaly syndrome. ORPHA:313800*

Optic nerve edema-splenomegaly syndrome is a rare presumably genetic disorder characterized by idiopathic massive splenomegaly with pancytopenia and childhood-onset chronic optic nerve edema with slowly progressive vision loss. Additional reported features include anhidrosis, urticaria and headaches.
