Potential competing interests: No potential competing interests to declare.

The manuscript is well-written and introduces the open areas of research. There are a lot of references that cover the history of neurotransmitters since 1970 up to 2023. I utterly agree with its publication.

I might add the fact that the Conclusion part requires basic revision. I recommend adding what has been gained in the review and what could be mentioned as the prospects. The text in this part may be transferred to the Introduction because it gives a scope of each section. The present text of the conclusion could be placed as the final paragraph of the Introduction.
