

Review of: "Investigations on Input Impedance and Radiation Pattern of a UWB Antenna for Microwave Imaging"

Purnima K Sharma

Potential competing interests: No potential competing interests to declare.

Overall Presentation:

The article is well-organized and structured, making it easy to follow the flow of ideas.

Language and technical terminology are appropriate for the target audience.

Figures and tables are used effectively to illustrate key concepts and findings.

Suggestions for Improvement:

Consider providing more detailed discussions on the practical implications of the findings for specific applications, such as microwave imaging.

Expand on the limitations of the study and potential areas for further research.

Ensure consistency in formatting and referencing throughout the article.
