¹ Universiti Teknologi Mara

Potential competing interests: No potential competing interests to declare.

Overall, the paper is lacking in novelty, and the results obtained were not contributing to the research gap.

Abstract: Suggested to add the potential application of the product in the last sentence.

Introduction: The introduction part could be improved by writing the content with the flow of introduction of the materials used, the important current findings, and the research gap. This is a research paper, not a review paper. Please also check the language and errors in this section.

Materials and Methods: In this section, please clearly describe the materials used and their properties. Explanations on 2.0, 2.1, & 2.2 are unnecessary. Figures 1-6 can be put together as one. Separate the sections between fiber treatment and composite preparation. A flowchart will be better.

Results and Discussion: 4.1, lines 1-10, should be written in the materials & methods, not results and discussion. All results must be discussed with scientific explanation and supported by previous findings. This section needs to be rewritten.
