The paper is well written. The author understands his field of knowledge and presents the latest data. Graphics and images are presented well. However, I think there are several things to pay attention to:

1. Please use new IPCC data
2. I saw you use estimated data to determine greenhouse gas emissions. I think it would be better if you measured the greenhouse gases directly in the field, for example using the chamber method
3. T Data interpretation has not been enriched with theoretical basis or data from relevant previous studies. Conclusion has not answered the study objectives clearly.
