Dear authors,

The manuscript is interesting and you reached the aim of the study. I recommend to add the questionnaire you used to collect data in order to know the level of detail of the questions and the clearliness of them. I also suggest that you explain if this questionnaire was tested prior to send it through WhatsApp groups. Finally, for the readers it could be better that you include a Table comparing the consumption of beverage between females and males and by groups of age.

I hope these suggestions can improve the quality of your manuscript.
