Potential competing interests: No potential competing interests to declare.

The paper defines the representations of a Lie groupoid as homomorphisms of the Lie groupoid to the frame groupoid. Other than that definition, no results are claimed in the paper. The definition of the product bundle is repeated three times in one way or another. The definition of the tangent bundle is not clear, since it includes an object 'b' not defined before. The paper contains many misprints and can clearly be improved.
