Potential competing interests: No potential competing interests to declare.

1. Overall presentation of this article is good.
2. Before abbreviation section, authors added an image(can arrange/keep inside of introduction or can keep it in Appendix section).
3. There is no introduction section.
4. In 'Keywords' section, authors mentioned about the terms 'survey' & 'review'. I do not think it has to mention in that section.
5. There is no chapter summarization paragraph(generally it has to mention at the end of the introduction).
6. Figures required proper citations.
7. Abstract and conclusion section require modifications based on the presented contents.
8. References(not even in same format).
