Greetings,

I consider this **article (Regulatory Compliance of PCDD/F Emissions by a Municipal Solid Waste Incinerator: A Case Study in Sant Adria de Besos, Catalonia, Spain)** a technical report because it is showing only the results of continuous monitoring of the hazardous pollutants generated from the municipal incinerator in that area. It does not show details of analytical and sample preparation, nor the sampling campaign.

The writing language, scientific approach, and discussions are excellent. However, the presentation of data and results can be more efficient.

As for the campaigns in 1998, 1999, 2000, 2005, 2006, 2014, and 2017, for better understanding and logical presentation of data, they need to be tabulated for easy comparison.

Discussion needs to be on two stages: 1) Technical and 2) Management wise and should provide both technical and management recommendations.
