Potential competing interests: No potential competing interests to declare.

1. The author needs to mention the country name on the title page of the manuscript.
2. The introduction part seems like a report, not like a scientific journalistic approach.
3. The author said that ethical approval was obtained but did not mention any authentic ID number to trace it.
4. The materials and methods section was not well explained. Each neurobehavioral test should be described individually.
5. The results section should be described elaborately with each test.
6. Only a table is not enough to show the data. Rather, make graphs, bars with signs of statistical significance or not.
