Dear Authors,

Here are my comments.

In abstract

Objective; Remove the period from March 2022 to May 2022.

Methods; Please mention how many participants were approached

Introduction;

Please rephrase this sentence; The aim of the present study was therefore to determine the seroprevalence of HBV and HCV infections and associated factors among pregnant women at the community level in Robe town administration southeast, Ethiopia

Material and Methods

How did you identified the participants. What data you use to screen them? Was it from health clinic database? How many was identified? How many were recruited. Need to explain further.

You need to mention period of recruitment separately.

What do you mean by pre-tested? Did you conduct a reliability test? You should mention if it is an adaptation. What is the Cronbach alpha?

You need to write a section on statistical analysis.

The discussion need be rewritten. Please add strength and limitation.

Do not put your result in the conclusion.

Please write the conclusion base on the result.
