Potential competing interests: No potential competing interests to declare.

1. I feel the authors have not fully captured their results in the abstract. Include the results for energy levels, water quality parameters, feed intake, and cost benefit ratio.
2. The authors have failed to give results for the microbiological analysis, which was included in the materials and methods.
3. Correct the first sentence of the abstract where you stated that there are seven diets. You have eight diets, including the positive control.
4. I expected you to discuss why there are sudden drops in the weight gain in figure 1.
5. In your discussion, I expect to see more than two citations when you say "several studies..." and "studies...", please cite and reference the studies.
