Potential competing interests: No potential competing interests to declare.

1. The authors should provide the mesh view in the manuscript along with the y^+ value obtained for the turbulence model used in the study.
2. The authors should provide the temperature distribution across the entire computational domain.
3. A detailed mathematical model should be provided in the manuscript.
4. The authors should provide the variation of the local convective heat transfer coefficient for all the cases considered in their study.
5. The results and discussion part should be elaborated.
