Review of: "Isolation of a Novel Plant Growth-Promoting *Dyella* sp. from Danish Natural Soil"

Anto Budiharjo¹

1. Biotechnology, Universitas Diponegoro, Indonesia

In the abstract, environmental soils were very broad; be more specific about the area where you took samples.

If the bacteria were isolated from surface-sterilized roots, it meant these were endophytic bacteria. So, it would be much better if you wrote the title accordingly.

The abstract does not depict the research that has been done.

In the introduction, mention the culture-dependent and culture-independent methods based on the reference. Put some more references in the introduction. Do not mention the results of the research.

Give more explanation in the discussion, as you have many results from the experiments.
