Potential competing interests: No potential competing interests to declare.

The paper can be improved by adding more technical content to address how to properly manage the CryptotAudit for the future. The current list of challenges in the paper is still on the high level of how to improve the awareness of auditors, but some technically supported solutions will be useful and add value to the paper. The content of CryptoAudit can be explored more deeply. Also, blockchain technology has special features to maintain data security, which could support the audit in some way. This can be further discussed.
