**Potential competing interests:** No potential competing interests to declare.

The authors expose a promising quantum theory of human consciousness, starting from two main elementary duality principles, i.e., the "consciousness of change-unchange" and the "consciousness of inclusion-exclusion", hence, making use of quantum field theory based on the path integral approach to quantum mechanics to build up a quantum holographic theory of human consciousness able to explain events of phenomenic reality as they are "seen" by humans. In my opinion, their theoretical research deserves to be followed with interest.
