Potential competing interests: No potential competing interests to declare.

1- The introduction part is not an introduction! It should contain the problem, definition of the keywords and other necessary words or expressions and also a chronology of the literature review and also the main purpose of the study.

2- It is not common to use "we" or "us" in scientific papers. the sentences should be changed into passive form or the third person.

3- The keywords should be extended to more necessary definitions.

4- In the theory part, the numerical solution should be explained.

5- A part has to be added for the introduction of the experimental data used for comparison.

5- The results and discussion part is very weak and there is no analysis or discussion.

6- Where is the conclusion part?!
