

Review of: "The Efficacy of Copper Nanoparticles in Treating Viral Skin Infections: A Systematic Review and Meta-Analysis"

Ashok Kumar Janakiraman

Potential competing interests: No potential competing interests to declare.

The efficiency of copper metal nanoparticles in a particular field of study was the main focus of this review paper. However, the information provided in this review study is poor and inadequate. A study topic, literature search, data extraction and coding, data analysis, and interpretation of the findings and graphical summaries are all necessary steps in a meta-analysis. Personally, I think the information supplied will be insufficient to demonstrate the effectiveness of copper nanoparticles against viral infection. The efficacy of copper nanoparticles against molluscum contagiosum, varicella-zoster, and herpes simplex was not addressed by the author of this piece. Moreover, with a few exceptions, the references cited are extremely outdated.
