Dear,

I would like to say thank you for considering me as a reviewer for this potential case study.

I appreciate the author for having and investigating such deep issues that propagated to solve a problem in traffic/transportation system in most developing country that causes a a millions of death and injuries due to lack of proper coordination.

So, as per my observation the followings are some of my comment for the authors.

1. On the title: starts from A review of.... make it clear is that review or case study or original research work. So, try to make clear for the users.
 2. In the abstract part the statement the study identified key challenges: from those challenges "low death registration rates". What is the implication of this statement please tried to indicate properly the implication of this statement on the body of the study and how it can be the a challenge in traffic/transport system having low death registration.
 3. Under Introduction and Literature review their is some statement duplicated: for instance report from WHO 1.35 million, 50million so try to avoid the same statement in different part of the study. or incorporate the Literature review part under Introduction.
 4. Most reference used in this case study is outdated please try to use latest research works, reports or document that show the proper investigation of this study less than five year of publication. For instance WHO present yearly report, but the author uses old report that cannot represent current global situation like WHO report 2012, 2019 etc.
 5. The author must use proper format of the journal
 6. In recommendation, the last paragraph, In conclusion please finalize the conclusion part under conclusion topic.
 7. The number of recommendation is a lot, while considering the conclusion part and the finding of the case study. So, please use your finding and conclusion as framework for recommendation.
- In general, this case study is really well organized, confidential and realistic that support in solving the problem Zambia faced o\in traffic/transport system management that causes traffic crashes and other. As a result, I fully accept this paper with indicated minor revision for publication.

With Regards!
