**Potential competing interests:** No potential competing interests to declare.

This is a good article. It shows that AI-driven advancements in higher education institutions present notable strengths. However, several weaknesses detract from the overall effectiveness of the discussion. While the narrative acknowledges the importance of research in understanding the future implications of AI in higher education, it lacks depth in discussing methodological approaches and potential biases inherent in existing literature. Overall, the discussion would benefit from a more balanced assessment of both the opportunities and challenges posed by AI integration in HEIs.
