Potential competing interests: No potential competing interests to declare.

First of all, it is a quite interesting topic about the traffic noise restraint. From my point of view, there are two defects of a sound environmental surveys. The first is the lack of the detail of measurements. For example, the measuring condition, the timing of the measurements, the speed of the vehicles, etc. Second is the site of field test need a graph of in scale. However, I think the authors are the college students, their description of the target in present paper was already quite smoothly and logically.
