The study of "The Application and Pathway Regulation of Traditional Chinese Medicine in Lung Cancer Treatment: An Exploratory Review" is a valuable study that appropriately highlights the connection between Traditional Chinese Medicine (TCM) and modern medicine in the treatment of lung cancer. This study has demonstrated that Chinese herbal medicines play a role in improving immune function and can control the adverse effects of chemotherapy while potentially having synergistic effects with these drugs. This study can present new ideas. However, the current draft requires revision, as follows:

1. There are some similar studies in this area that the author needs to refer to in the article.

He, Z., Wang, Y., Han, L., Hu, Y., & Cong, X. (2023). The mechanism and application of traditional Chinese medicine extracts in the treatment of lung cancer and other lung-related diseases. *Frontiers in pharmacology*, 14, 1330518. <https://doi.org/10.3389/fphar.2023.1330518>

2. Some unrelated references are used in the article (such as reference 32), which should probably be removed, or the author should provide further explanation regarding the reason for using these sources."
